In the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (previously presented) A bumper system comprising:
a bumper beam having a face and ends; and
an energy absorber mounted on the face, the energy absorber having a non-foam polymeric piece and at least one foam piece attached to the non-foam polymeric piece, with the non-foam polymeric piece being one-piece with box-shaped sections interconnected by strap sections, and with the at least one foam piece being one-piece and encapsulating the strap sections and engaging at least a side of the box-shaped sections.
2. (previously presented) The bumper system defined in claim 1, wherein the non-foam polymeric piece is molded to the at least one foam piece during a process of molding the foam piece.
3. (original) A bumper system comprising:
a bumper beam having a face surface; and
an energy absorber engaging the face surface, the energy absorber having an elongated non-foam polymeric component with at least three longitudinally-spaced enlarged sections connected by strap sections, and having foam sections positioned between the enlarged sections and covering the strap sections.
4. (original) The bumper system defined in claim 3, wherein the enlarged sections are each box-shaped and have a hollow interior space.
5. (original) The bumper system defined in claim 3, wherein the enlarged sections each include a front wall with marginal material forming an opening therein.

6. (original) A bumper system comprising:
a bumper beam having a face surface; and
an energy absorber engaging the face surface, the energy absorber having an elongated non-foam injection-molded component with at least three longitudinally-spaced enlarged sections and a plurality of foam sections attached to the molded component between the enlarged sections;

wherein the enlarged sections are each box-shaped and have a hollow interior space, and further wherein the enlarged sections each include a front wall with marginal material forming an opening therein.

7. (original) The bumper system defined in claim 6, including a crush tower tube that extends from the marginal material rearwardly toward the bumper beam.

8-16. (canceled)
